Petunia America Alldouble

Marigold Sunkist

Petunia Igloo

All America Selections for 1943

Silver Medal Awards

Petunia [Ⓐ]

3412 America Alldouble

Distinctly different from all other double Petunias,—100% true for doubleness. This is the first of the "All-double Petunias" originated in this country to be offered to American gardeners. The plants branch freely but retain a desirable compactness. They grow about a foot tall and make a showy circular cushion 18 in. in diameter. The flowers measure up to 2¼ in. in diameter and are an appealing sparkling rose-pink color. The small mid-green foliage has little stickiness. Pkt. 50c; large pkt. \$2.25.

Marigold [Ⓐ]

Dwarf Double French

2944 Sunkist

The plants of this Silver Medal winner greatly resemble those of Butter Ball which was introduced last year. They are of compact, dwarf growth and therefore highly desirable for dwarf beds and borders, yet the individual flower stems are long enough to permit artistic arrangement of the flowers in vases of moderate size. Sunkist belongs to the Harmony type of Marigolds and has attractive double rich orange blooms. Pkt. 25c; large pkt. 60c.

Bronze Medal Award

3308 Petunia, Dwarf Compact Igloo [Ⓐ]

A delightful new Petunia making dense bushes of neat, compact growth covered continuously with a grand display of flowers from early summer until hard frost in the fall. The individual blooms are only 1½ inches in diameter but they are produced so freely as to cover the plants completely. They are a pleasing creamy white with a more pronounced yellow tint in the throat. Pkt. 25c; large pkt. 75c.

Honorable Mention

Single bedding Petunia [Ⓐ]

3332 English Violet

This belongs to the hybrida nana class and adds a delightful new color to this valuable group—a bright purple-violet of velvety richness, set against a dense mass of bright green foliage which sets off the flowers to good advantage. Pkt. 25c; large pkt. 75c.

Cosmos, Giant Sensation [Ⓐ]

2046 Dazzler

Like the other Sensation Cosmos this new variety exhibits a splendid combination of earliness, vigor, and size of flowers. The well-formed, broad-petaled blooms are an appealing deep amaranth crimson. They measure 3 to 4 inches across. Pkt. 25c; large pkt. 50c; ¼ oz. 75c.

Aster [Ⓐ]

1307 Victory Giant Mixed

Here is a new class of Asters which as far as the flowers are concerned resemble the California Giants but they start blooming well in advance of that popular type. Includes a splendid range of desirable colors. Pkt. 25c; large pkt. 75c.

Aster [Ⓐ]

1302 Extra-Early Navy Blue

Elegant large flowers in form not unlike those of the Giant Crego Aster but blooming considerably earlier. The individual flowers measure about 4 in. in diameter and are a deep velvety purple with the blooms well displayed on plants 20 in. tall. Pkt. 25c; large pkt. 75c.

Silver Medal Awards

Morning Glory [Ⓐ] § 3032 Pearly Gates

This superb White Morning Glory is a glorious newcomer. The flowers are lustrous white with faint creamy shading deep down in the throat. They average four and one-half inches across. The vigorous, fast-growing vines are covered with flowers from the middle of summer until frost. The heart-shaped leaves are a fresh light green color. Pkt. 15c; large pkt. 40c; ¼ oz. 75c.

Cleome—Spider Flower [Ⓐ] 1998 Giant Pink Queen

A showy hardy annual bearing from midsummer until frost huge trusses of bright salmon-pink flowers. As the petals fall they are succeeded by long seed pods carried on wiry long stems while new flowers continue to open at the top of the stems providing a continuous display until severe frost arrives. Pkt. 15c; large pkt. 50c; ¼ oz. 75c.

Cosmos [Ⓐ] 2051 Early Yellow Flare

This exquisite new Cosmos is similar to Early Orange Flare, the Gold Medal Winner of 1935, excepting its color which is a very rich and compelling golden butter yellow. Free blooming on long wiry stems, with airy serrated foliage. An excellent garden flower for background planting. It grows 3 to 4 feet tall and blooms all summer long. Pkt. 15c; large pkt. 40c; ¼ oz. 65c.

Bronze Medal Awards

3161 Nierembergia, Purple Robe [Ⓐ] △

This greatly admired, dwarf, deep violet purple introduction maintains its vivid color even in full sun and does not fade in the hottest climate. The plant has a neat, compact, free-flowering habit and grows only 6 inches tall. For edging or rock garden. Pkt. 25c; large pkt. 75c.

2908 Marigold Golden Bedder [Ⓐ] △

This dwarf Chrysanthemum-flowered Marigold is perhaps the earliest of all. The plants form symmetrical mounds covered with masses of golden orange flowers borne on long stems. It's Easy To Plan Your Garden By Following The Symbols Used Throughout This Book

The symbols shown below with explanations will help you much to plan your garden. They stand out from the text and therefore make it easy to pick out the kinds suited to specific conditions.

First of all most gardeners want to know if a plant is an annual, biennial, or perennial. In the case of perennials we have further identified them as half hardy, hardy, and tender, so that you may know about any winter protection required.

Climbing plants are wanted by many gardeners because they take so little space and add incomparable beauty to garden houses, trellises, fences, posts, etc.

With rock gardens still of major interest to thousands of gardeners the little triangle (Δ) will quickly direct the eye to those suited to this purpose.

Very important to success is the knowledge as to the amount of light required by certain plants in order to make the best display. There are comparatively few which will grow well in dense shade, but those suited to semi-shade will serve in most instances. Of course practically all those which do well in semi-shade also give a fine display in an exposure with full sun.

(A)=Annual. Annual flowers complete their life circle within one growing season. They must be sown every year.

(B)=Biennial. These require two years to bloom. Seed sown during one season will produce flowering plants the second year. Occasionally they live longer than two years.

[HHP]=Half-Hardy Perennial. These cannot stand much frost but may be kept alive by bringing indoors, placing in the cold frame, or covering securely during the winter.

[HP]=Hardy Perennial. These last for several years, withstanding considerable frost provided the soil is well drained.

[TP]=Tender Perennial. Tender perennials may be kept growing throughout the year in the house or greenhouse. Many of them are sh w bedding plants for a summer and fall display.

§=Climbing Plants. Climbing and trailing plants which are best grown with a support on which they can climb.

Δ =Suited to Rock Garden. Most plants suited to rock gardens are also desirable for dwarf beds and borders. The smaller the rock garden the smaller the plants should be.

⊙=Suited to Semi-Shade. Most plants suited to semi-shade also do well in a sunny exposure. Semi-shade means some sun for part of the day or a location where the plants receive ample indirect light from above.

●=Suited to Shade. Few plants do in dense shade but those marked in this way will be found quite satisfactory. There are no annuals which will bloom in deep shade.

***** Seeds marked with a * often are sown in late fall outdoors to germinate the following spring. Spring germination is quickest if they are placed in water and set in the freezing chamber of an electric refrigerator. To secure the beneficial effect of alternate freezing and thawing, thaw them out once a week and then freeze again. They will be ready for sowing after two to three weeks of this treatment.

All America Selections of 1941

These all America Selections from 1941 still are considered among the top ranking developments in annual flowers. A great many gardeners availed themselves of the opportunity of enjoying them during the past two seasons and we again offer them to you here, grouped together for easy reference for your enjoyment in 1943.

PLANT A

Patriotism, as well as common sense, demands that every one with a suitable piece of ground plant a Victory Vegetable Garden this year. No matter how small the plot the many thousands of them spread all over the country will sum up to an important contribution to the nation's war effort. Devote as much space to it as you can provide and take care of.

Home-Grown Vegetables have Better Flavor and More Vitamins

Home-grown vegetables invariably are much superior to most market produce. They are more tender and tasty because of their freshness. There is not the deterioration as is so often the case with market produce. Just remember how delectable Sweet Corn is when it reaches the table within an hour after having been pulled from the stalks. This also is true of Peas and Beans. Carrots, Beets, and other root crops, too, have a sweetness and flavor unknown to most people accustomed to eating produce which may be weeks old by the time it reaches the table.

Just think of stepping into the garden and picking what you need for the next meal—lots of it and of real goodness. It saves refrigerator space (and that means electricity) and the expense of frequent trips to the store. Gas, rubber, valuable time, and manpower are conserved.

VICTORY GARDEN

Garden Planning Insures Success

The planned garden insures a maximum of fresh vegetables from a given area. Decide first which vegetables you wish to grow and send your order just as soon as possible because some seeds are quite scarce this year. While you await their arrival make a planting plan. Arrange according to the planting dates given on the opposite page. The beginner will do well to restrict his activities to outdoor gardening as the simplest way to success. Plants of Peppers and Eggplants may be secured locally at the right time for setting out in the particular location. Tomato and Cabbage plants also are available almost everywhere though it is a simple matter to grow these from seed started in a box or pan placed in a sunny window. From 6 to 8 weeks are required to secure plants large enough for setting in the garden.

Arranging the Garden

In arranging the garden allow for sufficient space between the rows so that the plants will not be too crowded. From 12 to 15 inches of space suffice to separate the rows of Beets, Carrots, Lettuce, Turnips and Rutabaga. Spinach, Onions, and Radish can stand a foot apart. Swiss Chard, Bush Beans, Parsnip, Salsify, and dwarf Peas require not less than 2 feet between the rows. Lima Beans, Sweet Corn, tall Peas, Squash, Tomatoes, Muskmelon, Cucumber, and New Zealand Spinach must have not less than four feet separating the rows.

Succession Sowing

By planning for a succession of crops many vegetables may be had until late fall. Thus Beets, Carrots, Lettuce, Bush Beans, and Sweet Corn may be sown at two week intervals to produce a continuous supply of delectable young produce full of flavor and vitamins. Follow the planting calendar to determine the correctness of the sowing times. Consume all produce before it has reached its maximum size as it is then that it is most palatable and wholesome.

Just as soon as a row has been harvested replant with another crop after loosening the soil with the spade and crumbling it well. Follow the leaf crops such as Lettuce with either a root crop or one belonging to the edible seed group which includes Beans, Peas, and Sweet Corn. The root crops are followed by a leaf crop or the edible seed group. Lastly the edible seeds are followed with a kind grown for its leaves or a root vegetable. This rotation is quite important to secure maximum yields from the garden.

Canning and Storing

If space permits, plan to grow enough vegetables for canning a good winter supply. Also grow enough Beets, Carrots, Turnips, and Rutabaga for winter storage in a cool cellar or an outdoor pit. They will keep in good condition well into the late winter if stored cool but frostproof and slightly damp.

Soil Preparation

Spade the soil deeply just as early in the spring as it has lost its stickiness. Crumble well while turning each spadeful. Decayed manure is best spaded under but dried manures and fertilizer are best added after spading but before the surface is raked level and smooth. Use a string or line to secure straight rows. Open the furrows with a stick for seeds which are covered from $\frac{1}{4}$ to $\frac{1}{2}$ inch deep. The rows for larger ones such as Beans, Peas, and Sweet Corn are made with the edge of the hoe. Always sow thinly.

Planting Depth

Correct planting depth is highly important and the general rule to cover seeds three to four times as deep as their smallest diameter applies as well to vegetables as to flowers. Use the rake to draw the soil over the seed and firm by walking over the row or pressing down with the end of the rake. Firm planting is very important with practically all kinds of seed. If the weather remains dry apply a fine, continuous spray of water until the soil is well moistened to a depth of several inches. The seeds of Beets, Carrots, and Parsley may be soaked previous to planting for two hours in warm water. Drain and wash thoroughly in cool water. Drain again and mix with dry sand to facilitate sowing.

Thinning

Thin the plants when about an inch high if they come up too thickly. Thin a second and third time or until they stand far enough apart in the row so that they will not interfere with one another. Crowded plants cannot develop properly. For detailed directions about growing the various crops refer to the information given in the pages which follow and to the seed packets.

Cultivation

Cultivation plays an important part because it encourages a vigorous growth. Keep the soil surface well stirred during the growing season. However, never cultivate while the soil is wet as otherwise its good physical condition will be impaired.

Bush Lima Beans

Culture—Lima Beans are very susceptible to cold and seeds should not be planted until the ground has become thoroughly warm. Being gross feeders, they should be sown on well-enriched land, with the rows $2\frac{1}{2}$ feet apart, placing the beans six inches apart in the row, **eye down**. In light soil, cover about one inch deep, less on heavier soils. A good fertilizer applied at the rate of 20 pounds to every hundred feet of row, when the plants begin to bloom, will materially increase the yields. Hill plants slightly earlier in the season to hold the pods off the ground. **One pound will plant 50 feet of row.**

107 Fordhook Bush Lima

75 days. This variety is well known wherever Lima Beans are grown as it combines productiveness with choice quality. The plants make a vigorous, upright growth so that the pods are held well above the soil surface. This keeps them clean and avoids rust and rot even during wet seasons. The pods are borne in clusters which accounts for the productiveness of this splendid variety. Each pod is about 5 inches in length and contains 4 or 5 very thick, light green, oval beans which have a distinctive rich nut-like flavor quite unlike any other variety. Onion Seed

Ognon, FR.
Cipolla, ITAL.

Cebolla, SP.
Zwiebel, GER.

One ounce of Onion seed for 100 feet of drill, 5 to 6 pounds for an acre.

Culture—Seeds may be sown early in the spring in rows 18 inches apart, and as soon as seedlings are 3 to 4 inches tall they should be thinned out to stand 3 to 4 inches apart in the row. Pull when tops begin to die down, cure, and use, or store in a cool, dry place. By sowing seed of the Spanish type, such as Prizetaker and the Southport Globes, under glass in February or March and transplanting in April to open ground 3 to 4 inches apart in the rows bulbs of immense size may be produced.

The Best Red Onions

The red-skinned Onions are by far the best winter keepers lasting well into the spring, far beyond the time that any of the white or yellow varieties could be kept in good condition. They mature rather late, have solid flesh, and their flavor is stronger than any of the others.

580 Large Red Wethersfield. 110 days. A well-known variety with very large thick flat onions having a bright purplish red skin. Solid flesh, shaded pink near the skin. Pkt. 10c; ½ oz. 45c; oz. 80c; 2 oz. \$1.50.

The white-skinned onions are much milder in flavor than yellow or red ones but they do not keep so well.

584 Southport White Globe. 120 days. A well-known standard sort of medium size, perfect globe shape, with pure white skin. White, fine-grained flesh of fairly strong flavor. Pkt. 15c; ½ oz. 55c; oz. \$1.00; 2 oz. \$1.85.

588 White Bunching. This variety does not form bulbs and it is grown exclusively for green onions or scallions. Sow the seed thickly in rows and earth up gradually to blanch the stalks as far up as possible. Pkt. 15c; ½ oz. 55c; oz. \$1.00; 2 oz. \$1.85.

590 White Portugal or Silver Skin. 100 days. Attractive large, flat, pure white onions. A good keeper, also valuable for pickling and bunching. Fine-grained flesh of mild and pleasant flavor. Pkt. 10c; ½ oz. 45c; oz. 85c; 2 oz. \$1.60.

594 White Sweet Spanish

110 days. By far the largest of the Globe-shaped white varieties. It resembles in form and size the pale yellow Valencia except that the color of the skin is a pure transparent white. The flesh is firm yet tender and it has an exceptionally mild and sweet flavor. Under favorable conditions individual onions of astonishing large size can easily be grown. Even under average conditions they reach an exceptional size. Yet they are always of sweet mild flavor. Pkt. 15c; ¼ oz. 55c; oz. \$1.00; 2 oz. \$1.85.

Garden Peas

Pois, FR.
Pisello, ITAL.

Guisante, SP.
Erbsen, GER.

One pound will plant 100 feet of drill.

Smooth-seeded peas can be sown as early in the spring as the ground can be prepared. Subsequent frost does not hurt them. Sow in single or double row, 24 to 26 inches apart, covering the seeds about 2 inches deep. All wrinkled varieties are sown in the same manner, but the gardener must wait until all danger of frost has passed or otherwise the wrinkled seeds will rot. All varieties over 2 feet do better with support.

Smooth-Seeded Extra-Early Sorts

The hardiest sorts to be planted as soon as the soil can be put in condition.

These mixtures are made up of innumerable giant-flowering sorts of all colors. The larger sizes will quite naturally produce somewhat larger spikes than the smaller ones, and the latter should not be planted too late in the season. There are few gardens where a 100 bulbs of these could not be used to great advantage to add their stately appearance and brilliant colors during the summer and fall.

Lilium regale—the Regal Lily has proved of special value for garden planting.

Superbum—Swamp Lily

Tiger Lily

Lilium—Summer-Flowering Lilies

Lilies are among the most beautiful hardy garden plants. They are easy to grow and give a wonderful effect yet they take little space tucked away among perennials in the border where their towering spikes reign supreme. Take care to plant them just as early in the spring as possible and that means March or April in the vicinity of Philadelphia. Follow the planting depth as given under each variety.

Fertilizers for Lawn and Garden

Customer pays transportation charges on fertilizers

The War Production Board ordered in September of last year a nation-wide conservation of chemical fertilizers, prohibiting their use on golf-courses, cemeteries, lawns, roadsides, and non-commercial plantings of trees, shrubs and flowers. This situation affects all home gardeners, many of whom have become accustomed to using nothing but the highly-concentrated chemical fertilizers for their vegetable and flower garden. There is a possibility that approved grades of fertilizers will be made available later on for use on vegetables in the home garden.

Adco. The addition of Adco to the compost pile or to other vegetable refuse, grass clippings, leaves, etc., will quickly produce a clean, odorless manure within four months. Use 2 lbs. for each wheelbarrow load of refuse. 7½ lbs. \$1.00; 25 lbs. \$2.00; 150 lbs. \$10.50.

Aluminum Sulphate. To make soils acid. Use one pound to 10 square feet of surface. 5 lbs. 50c; 10 lbs. 85c; 25 lbs. \$1.50; 50 lbs. \$2.50; 100 lbs. \$4.00.

Bone Flour. Very finely pulverized bone. Use 15 lbs. per 1000 sq. ft. 5 lbs. 60c; 10 lbs. \$1.00; 25 lbs. \$2.25; 50 lbs. \$3.70; 100 lbs. \$6.00.

Bone Meal. The fertilizer for all purposes; safe and effective. Especially good for use in the perennial garden. It should be well mixed with the soil and will give a decidedly lasting effect. 25 lbs. for 1000 sq. ft.

5 lbs. 40c	50 lbs. \$2.50
10 lbs. 75c	100 lbs. \$4.00
25 lbs. \$1.50	500 lbs. \$18.50

BOVUNG
An organic fertilizer

is natural cow manure, containing not less than 75% organic matter, thoroughly dehydrated, and well pulverized. Entirely free of dirt and live weed seeds, and has much less odor than any similar fertilizer. Bovung is ideal for use on the lawn, while our experiments with it upon flowering plants have proved it superior to any other manure. Use 100 lbs. per 1000 sq. ft.

5 lbs. 35c; 10 lbs. 60c; 25 lbs. \$1.00; 50 lbs. \$1.65; 100 lbs. \$3.00; 500 lbs. \$14.00; 1000 lbs. \$26.50; ton \$48.00.

Cow Manure. Dried and shredded. A desirable natural plant food and soil builder. Use 100 lbs. per 1000 sq. ft. 10 lbs. 70c; 25 lbs. \$1.20; 50 lbs. \$2.00; 100 lbs. \$3.65; 500 lbs. \$17.00; 1000 lbs. \$32.50; ton \$62.00.

Cotton Seed Meal. An excellent organic fertilizer for ericaceous plants such as Laurel, Rhododendrons, etc. 20 lbs. for 1000 sq. ft. 5 lbs. 50c; 10 lbs. 90c; 25 lbs. \$1.50; 50 lbs. \$2.50; 100 lbs. \$4.75.

The rate of application under each product is average. In the case of fertilizers they may be decreased or increased within certain limits depending upon conditions. Excessive applications of fertilizer not only are harmful but may, in fact, cause damage. Michigan Peat and Peat Moss on the other hand may be used 4 to 5 inches deep for spading into the soil.

Hyper Humus. Humus is organic matter that has reverted to a soil-like condition. It will lighten heavy soils, while sandy soils are benefited through their added ability to retain moisture. Use at the rate of 2 to 4 lbs. per square foot. 25 lbs. 75c; 50 lbs. \$1.25; 100 lbs. \$2.00; 500 lbs. \$9.50; 1000 lbs. \$15.00; ton \$25.00.

Lime, Hydrated. Use 50 lbs. per 1000 sq. ft. 10 lbs. 30c; 50 lbs. 85c; 100 lbs. \$1.40; 500 lbs. \$6.50; 1000 lbs. \$12.00; ton \$20.00.

Limestone. Pulverized. For making soils alkaline nothing is safer than limestone. 70 lbs. for 1000 sq. ft. 80 lbs. 85c; 480 lbs. \$4.50; 960 lbs. \$8.00; ton \$15.00.

Muriate of Potash. Use 6 lbs. for 1000 sq. ft. of surface. 5 lbs. 45c; 10 lbs. 75c; 25 lbs. \$1.25; 100 lbs. \$4.00.

Superphosphate (16%). Use 20 lbs. for 1000 sq. ft. 10 lbs. 60c; 25 lbs. \$1.00; 50 lbs. \$1.45; 100 lbs. \$2.35.

Michigan Peat

Nature's finest soil builder containing approximately 97% organic matter—the highest found in any peat product. Outlasts humus in the soil. Retains six times its weight in moisture and prevents draining away of liquid plant food. Stimulates root growth, lightens clay soil, and binds sandy ones. One bushel covers about 20 sq. ft. of area one inch deep. 1 bushel \$1.00; 3 bushels \$2.50; 10 bushels \$7.50; 1000 lbs. \$20.00; ton \$39.00.

Peatmoss, Horticultural

An indispensable material for the improvement of all kinds of soil and potting soil mixtures. One bale will cover about 200 square feet 1-inch deep. For seed pans, mix equal parts good soil, sand, and peatmoss. If used in the garden, always mix well with the soil 4-inches deep except when used as a mulch.

25 lbs. \$1.50	not prepaid
50 lbs. \$2.75	" "
1 bale \$5.50	" "

Sift, Agricultural. Used upon Asparagus beds, chiefly for keeping down weeds at the rate of 20 lbs. per 1000 sq. ft. 100 lbs. \$2.00; 500 lbs. \$8.00.

Dried Sheep Manure

One of the most used animal manures in the growing of flowers and upon lawns. Use at the rate of 100 lbs. to 1000 sq. ft. 5 lbs. 40c; 10 lbs. 65c; 25 lbs. \$1.20; 50 lbs. \$2.00; 100 lbs. \$3.65; 500 lbs. \$17.00; 1000 lbs. \$32.50; ton \$62.00.

Tobacco Mulch, Coarse Ground. Supplies organic potash and nitrogen. It adds humus to the soil and will increase the value of any chemical fertilizer when used in equal parts. Very desirable for mulching the Rose garden. 50 lbs. \$1.85.

Tobacco Stems, Uncut. For coarse mulch. 50 lbs. 95c; 100 lbs. \$1.60.

Vigoro

At the time of going to press with this catalog no definite word has been received about the availability of Vigoro for your vegetable and flower garden. The manufacturer hopes that the Government will give their approval to a new but equally effective formula which does not draw on essential war materials. Just as soon as Vigoro becomes available again, we shall have it for you.

Wood Ashes. Wood Ashes are valued for their potash which is an essential element to all plants, but particularly important to those which require an alkaline soil such as Carnations, Delphinium, and Lilies. 25 lbs. per 1000 square feet. 25 lbs. \$1.25; 50 lbs. \$2.00; 100 lbs. \$3.00; 500 lbs. \$13.50.

For other fertilizers, see page 91.

Keep Your Soil Productive

Chemical fertilizers are not indispensable when it comes to keeping the soil productive. After all, they are of comparatively recent origin and mankind got along without them for many centuries. That does not mean that they have no value, but under present conditions gardeners will have an opportunity to go back to the old-fashioned manures which, although not as highly-concentrated, have other qualities important to plant growth.

By all means establish a compost heap as a valuable source of humus and plant food. ADCO will help you to produce your own rich, odorless manure from all kinds of garden refuse. Bovung, cow manure, and dried sheep manure may be used freely throughout the garden to increase soil fertility. Work them well into the soil surface or mix into the planting hole. Bone-meal and wood ashes may be mixed with these manures.

Directions to Customers

Name and Address—Please remember to write on each order and letter your full name, Post Office, County, and State. Also give the street name and house number, or P. O. Box besides the nearest Express Office.

Cash With Order—Remit by Post Office Money Order, Express Money Order, Draft, or Check. If you send cash, register your letter. We cannot be held responsible if these directions are not followed. If you request goods which are "Not Prepaid" to be shipped by Parcel Post please include in your remittance the cost of postage. We decline sending goods C. O. D. (Collect on Delivery). The prices quoted in this catalog comply with O.P.A. ceiling regulations as effective at the time of going to press. They are subject to change without notice.

Packing—No charge is made for boxes or packing on express or freight shipments nor for delivery to freight depot or express office in Philadelphia.

"Prepaid" and "Not Prepaid" Shipments in the U. S. A. and Possessions

(For Canada and Foreign, see below)

Seeds and Bulbs Sent "Prepaid"—All Vegetable Seeds, Flower Seeds, Bulbs, and Lawn Grass Mixtures are sent "Prepaid" to any Post Office in the United States or its possessions, or at our option by Express or Freight Prepaid. Customer bears the cost of transportation on all other articles.

Sundries—Sundries, except where quoted "Postpaid," are sent either by express or freight the purchaser paying transportation charges. Shipments by express offer the safest and quickest method of transportation but they are also more expensive than freight. If undecided you may safely leave the method of transportation to our judgment, otherwise please state on your order whether they are wanted by express or freight.

Local Delivery—There is no charge for delivery of goods in Philadelphia and immediate suburbs.

Canadian Shipments

Flower Seeds and Bulbs are sent "Prepaid." The complicated regulations concerning the importation of Vegetable Seeds from the United States into Canada force us, much to our regret, to decline all orders of Vegetable Seeds to be sent into Canada. All other goods are sent "Not Prepaid" by Express or Freight purchaser paying all transportation charges as well as customs duties. Recent legislation prohibits the importation into Canada of practically all kinds of bulbs, corms, tubers, dormant roots, rhizomes, including Gladiolus, Cannas, Dahlias, etc. Remittances from Canada must be made in U. S. funds.

Foreign Shipments

Foreign Customers will please remit in U. S. Funds. Flower Seeds, Vegetable Seeds and Bulbs quoted "Prepaid" (except Beans, Peas, and Corn) will be prepaid for regular postage but transit and surcharges as well as any costs for Consular invoices or clearance papers are to be included in the remittance. All other goods are forwarded "Not Prepaid." Customs duties cannot be prepaid.

Time of Shipment—All Seeds, Dormant Roots, Bulbs and Sundries are forwarded as soon after receipt of order as possible unless shipment at a later time is requested on the order sheet.

Safe Arrival of Packages—We guarantee safe arrival of all goods sent by express or mail to any point within the United States proper. If such packages are injured or lost we will replace them as soon as notified of the fact. Goods sent in any other way travel at purchasers' risk. Claims for damages or errors must be made on receipt of goods. We cannot be held responsible for failure after delivery of goods in good condition.

"Henry A. Dreer, Inc. gives no warranty, express or implied, as to the productiveness of any seeds or bulbs it sells and will not be in any way responsible for the crop. Our liability, in all instances, is limited to the purchase price of the seed."

Treated Untreated
Treated plant has close to three times
the root strength of untreated one.

The Hormone treatment of Dreer's Lawn Grass Seed induces quicker germination and more vigorous growth. The effect is most marked upon the roots of the young plants and as every gardener knows an extensive, well-developed root system is the foundation for a successful lawn able to withstand seasonable adversities and disease. Even with hormone treatment thorough soil preparation, fertilizing, and watering, are still very important.
